

Eftsure Integration

**eftsure**

**felix**

# Integrate with Felix to leverage the benefits of identifying frauds and errors at the time of vendor onboarding.

Organisations in capital and asset intensive operating industries, such as construction, property, and mining often face complex and disconnected procurement processes. Integrating Eftsure with Felix's Vendor Management module, simplifies these processes, as well as adding a layer of protection when onboarding vendors.

# Eftsure + Felix

The integration between Eftsure and Felix results in significant time savings and reduces the effort required in validating vendor bank details as part of the onboarding vendor process.

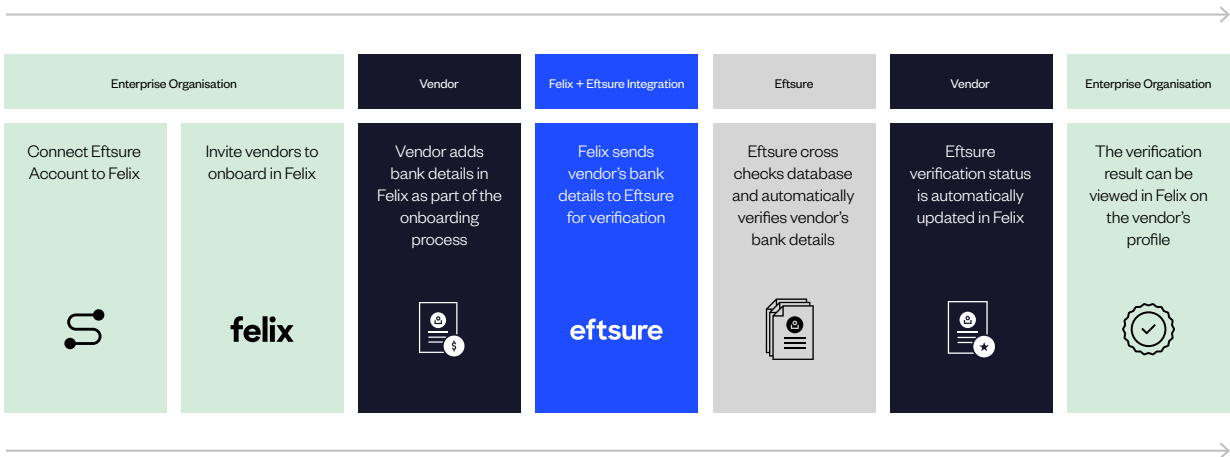

When vendors input Australian and New Zealand based payment details in Felix's Vendor Management module, this information is automatically connected with Eftsure to match the BSB and account number, with the vendor's business name and ABN.

Vendors receive instant validation or feedback on their payment details instead of organisations having to do manual checks themselves.

An additional benefit of this integration is that Felix's customers can maintain their existing procurement procedures, while benefiting from Eftsure's database of 6 million verified bank accounts.

Discover how Eftsure and Felix can transform your vendor onboarding process. Contact us today for a demonstration and see firsthand the impact of this powerful integration.
